Supplemental Table ST1. Genomic DNA input concentrations, total DNA input, and PCR amplification cycles used for Oxford Nanopore library prepar table summarizes the amount of genomic DNA available from each sample prior to library preparation, the DNA input used for sequencing library cc and the number of PCR amplification cycles applied. These data are provided to document sample-to-sample variation in starting DNA quantity and requirements and to facilitate interpretation of differences in sequencing read recovery among samples.

Sample Name	Location name as shown in Table 1	Filter type	Sample Code	Qubit [ng/uL]	Lib [ng/uL]	[ng] Input into Pool	Total ng Loaded onto Minion	# of PCR Cycles	Number of Reads 9.4 FlowCell
